***Response to Amendment***

The following is in response to the amendment filed on November 7, 2003.

Claims 6-9 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest a double doctoring device having the claimed combination of features including at least a doctor slat upstream of a doctor blade, whereby the angle between their respective points of contact is in the range of 15 to 70 degrees, and whereby the contact angle of the doctor slat is smaller than the contact angle of the doctor blade. The combination of the slat and blade and their angles of disposition read over prior art double doctoring assemblies consisting of two doctor blades.

***Response to Arguments***

Applicants arguments filed on November 7, 2003 have overcome the rejection of claims 6-9 under 35 U.S.C. 103(a) as being unpatentable over Leighton (WO 98/27279) in view of Kivimaa (US 5,178,731) and further in view of Boucher (US 5,032,229). Accordingly, this rejection is withdrawn.

Upon reconsideration of the prior art of record and the declaration filed on June 18, 2003, and after a further search of the prior art, there is no express teaching or suggestion for using a double doctor blade assembly for removing water from the pores of a suction roll. A double doctor is designed to remove paper and fibers adhered to the surface of a papermaking roll (which may be a suction roll). Fibers (and perhaps some water) may be removed from the pores

of the roll caused by a foil effect, resulting from having a stationary doctor blade against a moving roll surface. However, the prior art, and in particular Leighton, teaches that this foil effect is undesirable and ineffective with a doctor blade, because debris removed from roll pores by a doctor blade adheres to the back side of the blade and is not completely removed from the roll surface. Using two doctors only increases this negative effect by providing more locations for debris to accumulate. To enhance the cleaning of the roll pores in a suction roll, the prior art additionally provides a source of pressurized fluid or suction disposed between the two blades.

The function of the doctor slat is different than that of a doctor blade. A slat is designed to remove water from the pores of the suction roll through a pronounced foil effect, rather than to scrape debris from the surface of the roll. Therefore, it would not have been obvious to substitute the leading blade of a double doctor with a doctor slat, as the two devices have different functions leading to different effects.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
